

As part of the modern requirements to keep pace with the changing work environment, the process of using information technology in government agencies emerges as a major requirement to keep pace with these great developments, and government agencies must adopt and adapt to them and order workers to implement them. their

From this point of view, the problem of this national forum revolves around the following question: To what extent can the State rely on information and communication technologies to improve performance at work? in general ?

Themes of the national colloquium

The first axis: the relationship between the use of information technologies and the work performance of employees

The second axis: the development of career creativity by improving the work environment and performance

The third axis: Algerian professional experience based on information and communication technologies

The fourth axis: - The role of information and communication technologies in reducing corruption at work

The fifth axis: - The strategy of the State to upgrade the civil service and the priorities for improving performance at work

Sixth axis: the role of information and communication technologies in improving the control and inspection of jobs

The seventh axis: criteria for improving work performance in Algeria.

The eighth axis: the possibility of benefiting from the experiences of other countries.

The probability of the national colloquium

The information revolution that has ignited since the last decade of the last century has opened wide horizons for the development of administrations and the modernization of their systems, methods and working mechanisms, which affects citizens, and even on all state institutions in the form of providing services in a more sophisticated and efficient way

The meaning of success increases when the possibilities available decrease and the developments and variables around us accelerate, then the belief in the capacity of human resources and their role in bringing about the desired change increases because the success of any organization is linked to the success and skills of its members.

In light of these reasons, the orientations of government agencies have included various aspects of the administrative process, focusing mainly on the dimensions related to the management and development of human resources, and the enhancement of the uses of information technology. information and modern technologies in their performance

Therefore, the management of human resources and the improvement of the level of work performance of employees are at the forefront of the concerns and priorities of the administration in general, because the elevation of the level of work performance leads us to improve and to increase institutional performance in order to deliver the service faster and faster. of high quality and in line with the expectations and needs of service recipients

Ministry of Higher Education and Scientific Research

Abdelhamid Ben Badis University of Mostaganem
